5502W or B Open wrist and ankle, White or Blue

5540W or B Elastic wrist and ankle, White or Blue

NEED HELP? We can help you make the right fabric choice for your needs! Technical information is available for all non-wovens that we use.

SPUNBONDED

POLYPROPYLENE: Available in several weights—from 35 gram up to 65 gram—and a variety of colors: white, yellow, light and dark blue, red and orange. These non-wovens offer splash protection from non-hazardous liquids and dry particulates and provide an inexpensive method for color coding.

POLYCOATED SPUNBONDED

POLYPROPYLENE: Fabric made by laminating a coating of 1.25 mil liquid polyethylene to the polypropylene substrate. This fabric is not breathable. While providing an excellent shield against liquids, it is more comfortable to wear in a cooler environment. Available in white.

SMS: Similar to Spunbonded Polypropylene, this soft, comfortable non-woven has two layers of spunbonded with a third layer of meltblown in between. Great for dusty areas and superb for splash protection. Available in standard white and blue or you may special order light green or yellow.

MICROBREATHE®: Microporous laminates are the newest arrival on the non-woven scene. Microporous film is laminated to a spunbonded polypropylene substrate to provide a barrier that is strong and breathable as well as an effective shield against many liquids. Available in white.

POLY-SAFE®: Another arrival to the non-woven world, this fabric provides effective protection from several hazardous chemicals. Its structure provides comfort not typically found in fabrics designed for this level of protection. Available in white, blue and yellow.

Poly-Safe® is a registered trademark of PGI Nonwovens.

SONTARA FR: A non-woven with outstanding flame retardant properties which also effectively repels water, oil, grease dirt and blood. Available in white and blue/green.
